

1. inline - something which is available with element or tag itself using style attribute
2. id based styling - eg. something that is specified as style for "#myDIV"
3. internal class - something which is available as a class at page level by classname
4. external class - something which is available as a class from css file by classname  
[here the last css file in sequence will matter]
5. tag specific styling - eg. something that is specified as style for "DIV" tag
